

IREL's MATERIAL SUPPLY POLICY

IREL's annual production is determined by permission granted by respective government in terms of statutory clearances and not based on prevailing industrial demand. As such, availability of processed mineral is not ascertained prior to setting up of down stream industry from IREL. Productions of heavy minerals are incidental, in the process of production of strategic material as they are associated minerals in source material. IREL's products are industrial material and its policy is geared towards maintaining sustainability of supply.

Prospective / new buyers may note that the supply would be subjected to:-

- a) Meeting full requirement of DAE constituent units, on priority.
- b) Meeting the domestic demand of existing customers on a sustainable basis within the quantities permitted under stipulations by Government authorities.
- c) New industrial customers are encouraged, subject to grant of new permission to IREL for increase in production.
- d) New units can register their requirement at IREL website, however supply is considered in a transparent manner when necessary approvals are available with IREL for the increased production.

Canvassing in any form for seeking material may lead to disqualification.
